10 Maintenance

* Please read carefully. This document is binding for any warranty case.
* Any installed PV system less than 500m from coastline, please refer to the Near-coast installation manual.
Purpose of this guide

This guide contains information regarding the installation and safe handling of Wuxi Suntech Power Co., Ltd photovoltaic module (hereafter referred to as "module"). Wuxi Suntech Power Co., Ltd referred to as "Suntech".

Installers must read and understand this guide prior to installation. For any questions, please contact Suntech's Global Quality & Customer Support department or our local representatives for more detailed information. Installers must follow all safety precautions as described in this guide as well as local requirement and regulations by law or authorised organisations.

Before installing a solar photovoltaic system, installers should familiarize themselves with its mechanical and electrical requirements. Keep this guide in a safe place for future reference (care and maintenance) and in case of sale or disposal of the modules.

Suntech modules are tested and certified for installation worldwide. Different regions may have different regulations for solar PV installations. In this guide, hereafter “IEC Only” is used to refer to regions where IEC standard applies, e.g. Europe, Middle East, most of Asia Pacific countries; “ UL Only ” is used to refer to regions where UL standard applies, e.g. United States, Canada; all other references are global.

General safety

- Modules that fall under this application class may be used in system operation at more than 50V DC or 240W, where general contact access is anticipated. Modules qualified for safety under IEC 61730-2 and within this application class are considered to meet the requirements for Safety Class II. (IEC Only)
- Installing solar photovoltaic systems requires specialized skills and knowledge. Installation must only be performed by qualified personnel.
- Installers must assume all risks of injury that might occur during installation, including, but not limited to, the risk of electric shock.
- One single module may generate more than 30V DC when exposed to direct sunlight. Contact with a DC voltage is potentially hazardous and should be always avoid.
- Do not disconnect the modules or any electrical part under load.
- PV modules generate electricity when exposed to sunlight. Number of modules string connected can cause lethal shock and burn hazards. Only authorized and trained person should have access to the modules.
- Photovoltaic solar modules convert light energy to direct current electrical energy. They are designed for outdoor use. Modules can be ground mounted, mounted on rooftops, vehicles or boats. The proper design of support structures lies within the responsibility of the system designers and installers.
- When installing the system, abide to all local, regional and national statutory regulations. Obtain a building permit if necessary.
- The electrical characteristics are within ±3 percent of the indicated values of Isc, Voc and Pmax under standard test conditions (irradiance of 1000 W/m², AM 1.5 spectrum, and a cell temperature of 25°C (77°F) ).
- Only use equipment, connectors, wiring and support frames suitable for solar electric systems.
- Do not use mirrors, other magnifiers or antifictionally concentrated sunlight onto the modules.
- Always use fall protection equipment when working from heights of 6 feet (183cm) or above. Follow Occupational Safety and Health Act (OSHA) or local governing safety regulations regarding Fall Protection. (UL Only)
- Do not sit, stand, step or walk on any side of the module, including the frames.
- Do not permit any part of the module(s) to be submerged or allow for constant water to soil the module(s) unless it’s natural rain fall or periodic cleaning.
- Do not permit constant dew on any part of backsheet of the module.

Handling safety

- Do not lift the module by grasping the module's junction box or electrical leads.
- Do not place any heavy or sharp objects on the module.
- Be cautious when placing the module down onto a surface, particularly when placing it in a corner.
- Inappropriate transport and installation may break the module and void the warranty.
- Do not attempt to disassemble the modules, and do not remove any attached nameplates or components from the modules.
- Do not apply paint or adhesive to the module top surface or backsheet.
- To avoid damage to the backsheet and cells, do not scratch, dent or hit the backsheet. During the transportation, do not to apply direct pressure on the backsheets or front glass.
- Do not drill holes in the frame. This may compromise the frame strength, cause corrosion of the frame and void the warranty.
- Do not scratch the anodized coating of the frame (except for grounding connections at the grounding connection point on the back side of the module). It may cause corrosion of the frame or compromise the frame strength.
- A module with broken glass or torn backsheet cannot be repaired and must not be used since contact with any module surface or the frame can cause an electric shock.
- Work only under dry conditions, and use only dry tools. Do not handle modules under wet conditions unless wearing appropriate protective equipment.
- When storing uninstalled modules outdoors for any period of time, always cover the modules and ensure that the glass faces down on a soft flat surface to prevent water from collecting inside the module and causing damage to exposed connectors.
Installation safety

- Never open electrical connections or unplug connectors while the circuit is under load.
- Contact with electrically charged parts of the modules, such as terminals, can result in burns, sparks and lethal shock whether or not the module is connected.
- Do not touch the PV module unnecessarily during installation. The glass surface and the frame may be hot; there is a risk of burns and electric shock.
- Do not work in the rain, snow or in windy conditions.
- Avoid exposing cables and connectors to direct sunlight and scratches or cuts in order to prevent insulation degradation.
- Use only insulated tools that are approved for working on electrical installations.
- Keep children well away from the system while transporting and installing mechanical and electrical components.
- Completely cover the module with an opaque material during installation to prevent electricity from being generated.
- Do not wear metallic rings, watchbands, earrings, nose rings, lip rings or other metallic objects while installing or troubleshooting photovoltaic systems.
- Follow the safety regulations (e.g., safety rules for working on electrical power plant stations) of your regions and for all other system components, including wires and cables, connectors, charging regulators, inverters, storage batteries, rechargeable batteries, etc.
- Under normal conditions, a photovoltaic module is likely to experience conditions that produce more current and/or voltage than reported at standard test conditions. Accordingly, the values of Isc and Voc marked on this module should be multiplied by a factor of 1.25 when determining component voltage ratings, conductor current ratings, minimum factor of fuse sizes, and size of controls connected to the PV output.
- Only use same connectors to connect modules to form a string, or connect to another device. Removing the connectors will void the warranty.

Fire Safety

- Consult your local authority for guidelines and requirements for building or structural fire safety.
- Roof constructions and installations may affect the fire safety of a building; improper installation may create hazards in the event of a fire.
- Use components such as ground fault circuit breakers and fuses as required by local authority.
- Do not use modules near equipment or in places where flammable gases may be generated.
- The modules have been rated Fire Class C, and are suitable for mounting on to a Class A roof.

Product identification

Each module has three labels providing the following information:

1. Nameplate: describes the product type; rated power, rated current, rated voltage, open circuit voltage, short circuit current, all as measured under standard test conditions; weight, dimensions etc.; the maximum system voltage is 600 volts or 1000 volts depending on the product family DC for UL standard and 1000 volts DC for IEC standard. Depending on the products some are UL/IEC listed to 1000 volts while other UL products are 600 volts. Check your nameplate or contact your local representative for details.

2. Barcode: each individual module has a unique serial number. The serial number has 18 digits. The 15th and the 16th digits are the week code, and the 17th and the 18th digits are the year code. For example, STP xxxxxxxxxxxxxx2414 means the module was assembled and tested in the 24th week of 2014. Each module has only one bar code. It is permanently attached to the interior of the module and is visible from the top front of the module. This bar code is inserted prior to laminating.

3. Sorting label: four different marks are shown on this sticker. "QC Pass" assures that the module has passed the quality control examination. "HIPOT" means that it has passed the insulation test. Finally modules are sorted out according to their output current, referred as a corresponding symbol "Ix" attached, in which x takes the value 1, 2 or 3. To get optimal performance out of a string of modules it is recommended to connect only modules of the same "Ix" class (for example only I2 modules) in one given string. The
Selecting the location

- Select a suitable location for installing the modules.
- The modules should face south in northern latitudes and north in southern latitudes.
- For detailed information on the best installation angle, refer to standard solar photovoltaic installation guides or consult a reputable solar installer or systems integrator.
- Modules should not be shaded at any time. If a module is shaded or even partially shaded, it will fail to perform at ideal conditions and result in lower power output. A permanent and/or regular shade on the module voids the warranty.
- This installation manual is applicable for all pv system of 500 m or more away from the coastline. If you need to install your system less than 500m from the coastline please refer to Near-coast installation manual (www.suntech-power.com) or contact Suntech’s Customer Support department or our regional representatives.
- Do not use modules near equipment or in locations where flammable gases may be generated or collected.

General Installation

- Before installing modules check for any optical deviations. Any optical deviations noticed after system installed may void warranty. Any potential costs for labor, material or other cost such as documentation, safety or performing the (de/ re-) installation will not be covered.
- The module mounting structure must be made of durable, corrosion-resistant and UV-resistant material. Always use a tested and certified mounting structure approved for your system design.
- In regions with heavy snowfall in winter, select the height of the mounting system so that the lowest edge of the module is not covered by snow for any length of time. In addition, ensure that the lowest portion of the module is placed high enough so that it is not shaded by plants, trees or damaged by ground soil moved by or through the air.
- For ground mounting systems, the minimum distance Suntech recommend from the ground to the bottom of the module is at least 24 inches (60cm).
- Modules must be securely attached to the mounting structure. For Clamping System installation methods, the recommended maximum compression for each clamp is 2900 PSI (20 Mpa) in order to avoid potential damages to module frames. Follow the instruction of the clamping system supplier.
- Provide adequate ventilation under the modules in conformity to your local regulations. A minimum distance of 10 cm between the roof plane and the frame of the module is generally recommended.
- Always observe the instructions and safety precautions included with the module support frames.
- Before installing modules on a roof, always ensure the roof construction is suitable. In addition, any roof penetration required to mount the modules must be properly sealed to prevent leaks.
- Dust building up on the surface of the module can impair with the module performance. The modules shall be installed with a tilt angle no less than 10 degrees, making it easier for dust to be removed by rain. A flat angle requires more frequent cleaning.
- Observe and take into account the linear thermal expansion of the module frames (the recommended minimum distance between two modules is 2 cm).
- Always keep the front and backsheet of the module free from foreign objects, plants and vegetation, structural elements, which could come into contact with the module, especially when the module is under mechanical load.
- When installing a module on a pole, select a pole and module mounting structure that will withstand the anticipated wind load and snow load for the area.
- Ensure modules are not subjected to wind or snow loads exceeding the maximum permissible loads, and are not subject to excessive forces due to the thermal expansion of the support structures. Never allow modules overlap or exceeds the rooftop: Refer to the following installation methods for more detailed information.

Installation methods

- Modules can be installed on the frame using mounting holes, clamps* or an insertion system. Modules must be installed according to the following examples. Not mounting the modules according to these instructions may void the warranty.
*The minimum recommended length for each clamp is 50 mm.*

- Module can be installed in both landscape and portrait modes.
- The modules must be properly secured to their support so that they can withstand live load conditions, including wind uplift, to the pressure they have been certified for. It is the installer's responsibility to ensure that the clamps used to secure the modules are strong enough.

## Attachment guidelines

- Select the proper installation method depending on the load (See below for more detailed information).
- With different installation methods, the modules have been tested to withstand the loads of 2400 Pa, 3800 Pa and 5400 Pa according to IEC 61215 standard, equivalent of 1600 Pa (0.232 psi), 2500 Pa (0.363 psi) and 3600 Pa (0.522 psi) respectively under UL 1703 standard.
- The diagrams in the tables below are designed for illustration purpose. For each installation, modules can be installed either in portrait or landscape mode. If you integrate our obsolete products and need advice, please contact Suntech Global Customer Support Department for installation instructions based on older manuals.

#### Mounting system

- **Attachment to the long frame**
  - Use eight mounting holes (Exclude Ve)
  - Use four mounting holes

- **Attachment to the short frame**
  - Use four clamps
  - Use six clamps

#### Clamping system **

- **Attachment to the long frame**
  - Use four clamps

- **Attachment to the short frame**
  - Use four clamps on short frame
  - Use four clamps on the short frame and two clamps at the center of each long frame

#### Insertion System

- Use insertion system on short frame
  - Use an insertion system on a long frame

- Use insertion system on a short frame and two clamps at the center of each long frame

#### Clamping Zone

- From Module Edge to 1/4 Length ± 50mm
- (300mm)
- (100mm)

**NEXTracker***
Mounting system

* The loads of 2400 Pa, 3800 Pa and 5400 Pa are under IEC standard. The installation methods applicable for 5400 Pa are also relevant for 3800 Pa and 2400 Pa. The installation methods applicable for 3800 Pa are also relevant for 2400 Pa.

** The module clamps must not come into contact with the front glass or deform the frame in any way. Avoid shading effects from the module clamps and insertion systems. Drainage holes in the module frame must not be closed or obscured by the clamps.

*** Measurement A stands for the distance from the module edge to the clamping zone. Measurement A is 150mm for T series 35 mm thickness, 180mm for W series 35mm thickness, 280mm for V series 40mm thickness. The clamping zone defines the range for the middle point of the clamp.

**** The mounting holes reserved for Nextracker mounting system with special accessories.

**Recommended installation method of Nomal solar module:**
The modules in PV array are recommended to be installed horizontally, and cable length is not less than 0.7

**Recommended installation method of Half cell solar module:**
The head and tail of the modules in PV array are placed in a cross layout, and cable length is not less than 0.65m
General installation

- Any hardware used must be compatible with any other used material to avoid galvanic corrosion. Defects caused by corrosions void the warranty.
- It is not recommended to use modules with different configurations (grounding, wiring) in the same system.
- Excessive cables must be organized or fixed in an adequate way, e.g. attached to the mounting structure by using non-metallic cable ties. Solar cables, connectors and junction boxes should not be exposed to water exposure, and snow, and rain or water submersion for a long period of time (IP65/67/68).
- For applications requiring high operating voltage several modules can be connected in series to form a string of modules; the system voltage is then equal to the sum of the voltage of each module.
- For applications requiring high operating currents several strings of modules can be connected in parallel; the system current is then equal to the sum of the current of each string of modules.
- The maximum system voltage is 600 volts, 1000 volts or 1500 volts depending on the product family DC according to standards.
- The maximum number of series connected modules depends on system design, the type of inverter used and environmental conditions.
- Based on the maximum series fuse rating of module and local electrical installation code, always make sure Suntech PV modules are assembled with the appropriate string fuse for circuit protection.
- There is no specific limitation on the number of modules that can be connected in parallel, the number of modules is determined by system design parameters such as current or power output.
- To prevent the cables and the connectors from overheating, the cross section of the cables and the capacity of the connectors must be selected to suit the maximum system short circuit current. The recommended cable is PV wire with a cross section of at least 4mm².
- Caution: do not secure the cables too tight. Any cable damage caused by cable management system is not covered under Suntech's warranty.
- Always refer to the cable manufacturer's bending radius which includes the radius just behind the connectors.
- When designing large modules arrays connected to a single inverter, always take into account the resulting isolation resistance (Riso), which decrease increasing the number of modules in the array. A too low Riso can result in inverter faults.
- Please refer to local regulations to determine the system wires size, type and temperature.
- Suntech modules are supplied with connectors used for system electrical connections. The recommended connectors are C4 connectors, Amphenol H4 connectors, Multi Contact MC4 connectors etc. Suntech strongly recommends using the genuine connector type specified by Suntech’s product data sheet. Any choice of a different connector type other than specified may void the warranty of the module.
- To ensure reliable electric connection and to prevent possible intrusion of humidity, two connectors must be mated and locked together until a click can be heard.
- Long-term exposure to wet environments may cause connectors’ poor connectivity, resulting in current leakage and poor conductivity which voids the warranty. Suntech recommends proper connector/cable/wire management to prevent moisture intrusion. Depending on the amount of humidity, Suntech recommends periodic inspections of the installation system to maintain optimal module performance.
- The DC current generated by photovoltaic systems can be converted into AC and fed into a public Grid. As local utilities’ policies on connecting renewable energy systems to the Grids vary from region to region. Always seek the advice from a qualified system designer or integrator. Building permits, inspections and approvals by the local utility are generally required.
- Especially for larger installations Suntech recommends lightning protection following the local requirements and regulations.
- When the installation is finished and after connection to the grid please do a professional hand over to the owner including an installation protocol is required. Provide a clear documentation of the system to the owner consisting of following minimum data such as: user guide, system layout, data sheets, performance expectations, electrical system data e.g. a copy of the installation test report following minimum requirements of IEC 62446 / IEC 60364-6.
Grounding

• For grounding and bonding requirements, please refer to regional and national safety and electricity standards. If grounding is required, use a recommended connector type for the grounding wire.

• For grounding, this guide refers to module frame grounding. If grounding is required, make sure module frames (metal exposed to touch) are always grounded.

• Suntech recommends always refer to local state and national code requirements for PV module grounding. Suntech highly recommends negative grounding if it’s allowed by local authorities.

• When attaching the frame grounding hardware and wire to the frame it must be placed corresponding to the ground symbol stamped location to ensure proper electrical connection.

• Suntech recommends one of the following parts for grounding:

  1) Use M5 bolt and washer to bond the ground wire and aluminum frame through the grounding hole (as shown below). The tightening torque is 3-7Nm. All nuts and washers should be made of stainless steel. 4-14 mm² (AWG 6-12) exposed copper wire is recommended as ground wire.

  ![Diagram of M5 bolt bonding](image)

  2) Use WEEB-DPF to bond solar modules to module mounting brackets (grounding part is tested to UL467)

  ![Diagram of WEEB-DPF bonding](image)

  • Notice that WEEB teeth is positioned completely under the edge of the module frame.
  • When position of solar module is finalized, torque fasteners to 20.5 N-m/15 ft-lb using general purpose anti-seize on threads.
  • For more information, please contact supplier: BURNDY, http://www.we-llc.com

  3) Use Schletter clamps to bond solar module to module mounting brackets (grounding part is tested to UL467).

  ![Diagram of Schletter clamp bonding](image)

  • Recommend fastening torque is 20.5N-m/15 ft-lb.
  • For more information, please contact supplier: Schletter, http://www.solar.schletter.eu
To ensure optimum module performance, Suntech recommends the following maintenance measures:

- Clean the module minimum once a year or more often when required depending on the pollution. Remove all organic from the surface. Module with soiling or contamination may reduce the power generation of the system. Always use clean water and a soft non-abrasive sponge or cloth for cleaning. A mild, non-abrasive cleaning agent may be used to remove stubborn dirt.
- Uncontrolled pollution is voiding the warranty or not cleaning the modules in time voids the warranty.
- Check the electrical, grounding and mechanical connections every six months to verify that they are clean, secure, undamaged and free of corrosion. Or else the warranty may be voided.
- In the event of a ground fault condition, NEVER wash or spray modules with water until ground fault has been identified, corrected by an authorized solar inverter service technician and the inverter is fully operational. This can cause electrocution or a serious safety issue.
- If any problem arises, consult a professional solar service providers for suggestions.
- Caution: observe solar manufacturers’ maintenance instructions for all components used in the system, such as support frames, charging regulators, inverters, batteries etc.

* 请仔细阅读。该文件对任何保修情况都具有约束力。
* 距海岸线 500 米内安装光伏系统，请参考近海安装手册。
安全指南

总体安全
- 组件适用于大于50伏直流电压或240瓦功率以上的系统，通过IEC 61730-2标准即符合安全等级II才可以用于安全安装。（仅IEC）。
- 安装光伏系统需要专业技术和知识。安装只能由有资质的人员进行。
- 安装人员必须承担所有在安装过程中可能出现的危险，包括但不限于电击危险。
- 组件在阳光直射的条件下可产生超过30伏的直流电。与直流电接触有很高的潜在风险，请在任何情况下都避免接触直流电。
- 请勿在工作状态下断开组件和任何电器件的连接。
- 光伏组件通过阳光照射可以产生电流。许多组件串联可能导致致命的触电和灼伤危害。只有经过授权和培训的专业人员才能进行组件的安装工作。
- 光伏组件将光能转化成直流电能，它们适用于户外安装。组件可以安装在地面、屋顶上，车辆或船只上。系统设计师和安装人员负责支撑结构的合理设计。
- 安装系统时，须遵守所有当地、地区性和国家级别的法定法规。如有必要，请取得安装许可证。
- 组件在标准测试条件下，铭牌所标称的电性能参数与实际值有±3% 的偏差。（辐照度1000 W/m²，AM 1.5光谱，电池温度为25°C（77°F））。
- 光伏发电系统只能使用与之相匹配的设备、连接器、接线和支架。
- 请勿使用反光镜或其他放大镜将阳光直接聚焦于组件上。
- 在183cm或更高处作业时必须有防坠落保护措施。遵守职业安全和健康法案（OSHA）或当地有关坠落保护的安全规定。（仅UL）。
- 请勿坐于、站立于、踩踏或行走于组件之上，包括支架。
- 除自然降雨或者阶段性组件清洗外，请勿将组件的任何部位浸泡在水中或者持续用水冲击组件。

操作安全
- 请勿抓住组件接线盒或引出线提起组件。
- 请勿使组件掉落或使物体坠落于组件上。
- 请勿在组件上放置任何重物或尖锐物体。
- 组件要轻拿轻放。
- 不恰当的运输或安装可能损坏组件并使质保无效。
- 请勿拆解组件及组件上的铭牌。
- 请勿在组件玻璃或背板上使用油漆或粘合剂。
- 为避免损坏背板和电池，请勿刮擦、撞击或使背板产生凹痕，运输时，请勿直接施压于组件的背板或玻璃。
- 请勿在组件上钻孔。这可能破坏边框的强度，导致边框生锈并使质保无效。
- 请勿在组件玻璃或背板上使用油漆或粘合剂。
- 请勿使用除反光镜或其他放大镜将阳光直接聚焦于组件上。
- 在183cm或更高处作业时必须有防坠落保护措施。遵守职业安全和健康法案（OSHA）或当地有关坠落保护的安全规定。（仅UL）。
- 请勿坐于、站立于、踩踏或行走于组件之上，包括支架。
- 除自然降雨或者阶段性组件清洗外，请勿将组件的任何部位浸泡在水中或者持续用水冲击组件。

安装安全
- 请勿在电路有负载的情况下打开电气连接处或拨出连接器。
- 如果触碰组件带电部件，例如连接器，无论面板是否已接通，可能导致烧伤、火星和致命电击。
- 在安装过程中请勿在必要时触碰组件、玻璃表面和支架可能有产生高温；会产生烧伤和电击危险。
- 请勿在下雨、下雪或大风天气情况下安装组件。
- 为防止组件绝缘效果降低，请勿根据导电或使组件发生短路，运输时，请勿直接施压于组件的背板或玻璃。
- 请勿在组件上钻孔。这可能破坏边框的强度，导致边框生锈并使质保无效。
- 请勿在组件玻璃或背板上使用油漆或粘合剂。
- 为避免损坏背板和电池，请勿刮擦、撞击或使背板产生凹痕，运输时，请勿直接施压于组件的背板或玻璃。
- 只能在干燥环境中作业，且只能使用干燥的工具。请勿在未佩戴任何防护措施的条件下在潮湿的环境中作业。
- 如需在户外将未安装的组件存放一段时间，须始终遮盖组件并保证玻璃面向上且置于柔软平面上，防止组件内部积水和连接器的损坏。
- 请勿在电路有负载的情况下打开电气连接处或拔出连接器。
- 如果触碰组件带电部件，例如连接器，无论面板是否已接通，可能导致烧伤、火星和致命电击。
- 在安装过程中请勿在必要时触碰组件、玻璃表面和支架可能有产生高温；会产生烧伤和电击危险。
- 请勿在下雨、下雪或大风天气情况下安装组件。
- 为防止组件绝缘效果降低，请勿根据导电或使组件发生短路，运输时，请勿直接施压于组件的背板或玻璃。
- 请勿在组件上钻孔。这可能破坏边框的强度，导致边框生锈并使质保无效。
- 请勿在组件玻璃或背板上使用油漆或粘合剂。
- 为避免损坏背板和电池，请勿刮擦、撞击或使背板产生凹痕，运输时，请勿直接施压于组件的背板或玻璃。
- 只能在干燥环境中作业，且只能使用干燥的工具。请勿在未佩戴任何防护措施的条件下在潮湿的环境中作业。
- 如需在户外将未安装的组件存放一段时间，须始终遮盖组件并保证玻璃面向上且置于柔软平面上，防止组件内部积水和连接器的损坏。
消防安全

- 咨询您当地的部门获得关于安装或建筑消防安全方面的指导和要求。
- 顶层结构和安装可能影响建筑的消防安全；不恰当的安装可能导致火灾危险。
- 在当地部门要求下，使用例如接地故障断流器和保险丝之类的设备。
- 请勿在可能产生可燃气体的环境中或设备附近操作面板。
- 该组件的防火等级为 C，适合安装于类别 A 的屋顶上。

产品鉴别

每个组件有三个标签，提供下列信息：
1. 铭牌，说明了产品类型；额定功率、额定电流、额定电压、开路电压、短路电流，重量、尺寸等所有数值均在标准检测条件下测量得出；对于 UL 标准而言，系统最大电压为 600 伏或 1000 伏，取决于组件的直流电流，对于 IEC 标准而言为 1000 伏直流电压。有些 UL/IEC 产品表示其最大电压为 1000 伏，而其它 UL 产品为 600 伏。检查您的产品铭牌或联系您的当地代表获得详细信息。
2. 条形码：每个单一的组件有一个专属的序列号。该序列号有 18 位数字。第 16 位和第 18 位是年份编码，第 17 位和第 18 位是年份编码。例如，STP xxxxxxxxxxxxxx2414 表示组件在 2014 年第 24 周组装和检测。每个组件只有一个条形码。它将永远粘贴在组件内部，并且可以从组件前端看到。该条形码在层压前被插入。
3. 分档标签：该标签上显示了四个不同的标志。“QC Pass”确保组件已通过了质量控制检查。“HIPOT”表示已通过了绝缘测试。最后根据组件的输出电流将组件筛选，由相应的“IX”符号表示，其中 x 表示值 1，2 和 3 为使组件串获得最优性能，建议只在一个串中选用“IX”类别相同的组件，（例如只有 I2 组件）。“条形码”的作用请参考上述“条形码”介绍。

机械安装

场地选择

- 为组件的安装选择合适的场地。
- 组件在北纬下应面朝南，南纬下面朝北。
- 如需关于最佳安装角度的详细信息，请参考标准太阳能光伏安装指南或咨询专业太阳能安装人员和系统集成商。
- 组件在任何时间都不应被阳光遮挡。如果整个或部分组件被遮挡，它将无法在理想条件下发挥性能并导致较低的功率输出。组件长期或经常性地被遮挡住阳光将损坏组件并使质保无效。
- 本安装手册适用于所有离海岸线 500 米或以上距离的光伏系统的安装。如果您需要将系统安装于离海岸线 500 米以内的距离，请参考近海安装手册（www.suntech-power.com）或者联系尚德全球质量 & 客户支持部门以及我们的地区代表。
- 请勿在可能产生或收集易燃气体的设备附近或场所中使用组件。

常规安装

- 安装前请仔细检查光学偏差。任何在系统安装完成后出现的光学偏差都有可能使质保无效。一旦出现，任何潜在的花费诸如人工费、材料费、文件编制费、人员安全以及去除光学偏差产生的费用都不在尚德的质保范围内。
- 组件的支撑结构必须使用耐用、防锈和抗紫外材料制作。请使用经检测和认证批准的支撑结构。
在冬天有大量降雪的地区，请选择合适的支撑系统高度，使组件最低边缘在任何时候都不会被雪覆盖。另外，请保证组件最低部分放置的高度足够，使植物、树木不会遮挡阳光。

- 对于地面安装系统，尚德建议地面离组件底部的最小距离至少为60厘米。
- 组件必须稳固放置在支撑结构上。如使用夹带夹具的安装方式，每个夹具的建议最大压强为20Mpa，以防止对组件支架造成损坏。请遵守夹具系统供应商的说明。
- 根据您当地的规范为组件底部提供充足的通风。屋顶平面与组件的支架之间通常建议应有最少10厘米的距离。
- 组件必须稳固放置在支撑结构上。如使用夹带夹具的安装方式，每个夹具最小建议长度为50mm。
- 不允许组件重叠或者超出屋顶。请参考下列安装方式获得详细信息。

### 安装方式

- 组件可以使用安装孔、夹具或滑槽被安装在支架上。必须根据下列样例安装组件。没有根据下列说明安装组件，会使质保无效。

![使用安装孔安装组件](image1)

![使用夹具安装组件](image2)

*每个夹具最小建议长度为50mm。*

- 组件可以采用横向和纵向安装。
- 组件必须稳固固定在支架上，以便承受相应的载荷，包括风吸力。安装人员必须负责确保用于固定组件的夹具有足够的强度。

### 安装指南

- 根据载荷需求选择合适的安装方法（参考下文获得更详细信息）。
- 经检测，使用不同的安装方法时，组件可以承受2400Pa、3800Pa和5400Pa的载荷。（IEC61215标准）分别等同于UL1703标准下的1600Pa(0.232psi)、2500Pa(0.363psi)和3600Pa(0.522psi)。
- 下表中的图示仅供参考。对于每种安装方法，组件均可纵向或横向安装。如果曾安装尚德的旧组件需要咨询，请联系尚德全球质量 & 客户支持部门获取旧的安装说明以作为参考。

</tr>
</tbody>
</table>

*2400 Pa，3800 Pa 和 5400 Pa 为 IEC 标准下的载荷。适用于 5400 Pa 的安装方式可覆盖3800Pa和2400 Pa。适用于 3800 Pa 的安装方式可覆盖2400 Pa。

**任何情况下，组件夹具都不能触碰到前端玻璃或使支架变形，以避免组件夹具和滑槽遮挡电池片。夹具不能封住或盖住组件支架上的排水孔。

*** 测量数据 A 表示组件边缘到夹具区之间的距离。T 系列 35mm 厚度的测量数据 A 为 150mm，W 系列 35mm 厚度为 180mm，V 系列 40mm 厚度为 280mm。夹具区决定了夹具中心的范围。

**** 此安装孔位为 Nextracker 单轴安装支架预留，需搭配 Nextracker 专用配件安装使用。

尚德常规组件推荐连接方式：
方阵内组件横向安装，组件线长：正负极线长不小于 0.7m
尚德半片组件推荐连接方式：
方阵内组件头尾方向处于交叉布置，组件线长：正负极线长不小于0.65m

机械安装

电气安装
接地

- 对于接地和连接要求，请参考地区性和国家性安全和电气标准。如果要求接地，请为接地接线使用建议的连接器类型。
- 本册中的接地指的是组件支架接地。如果要求接地，确保组件支架（暴露、可接触的金属部分）始终是接地的。
- 尚德建议始终参考当地和国家有关光伏组件接地的规范和要求。如果当地机构允许，尚德强烈建议使用负极接地。
- 必须将支架接地硬件和接线安装到支架上所标注合适的接地标志位置以确保合适的电气连接。
- 尚德推荐使用下述一种接地零件：

1) 如下图所示，使用M5螺栓、垫圈在边框预留接地孔处将接地线缆与边框连接固定并形成导通，螺母拧紧力矩为3~7Nm。螺母、垫圈均使用不锈钢材质，接地线推荐使用4-14mm²（AWG6-12）外露铜线。

![接地连接示意图](image)

2) 使用WEEB-DPF将太阳能组件安装至组件安装支架上（接地零件通过UL467测试）。

![WEEB-DPF示意图](image)

- 注意，WEEB齿应完全放置在组件支架的边缘下方。
- 当太阳能组件的位置最终确定后，通常使用20.5牛 - 米 / 15 英尺 - 磅的扭矩紧固件放置螺纹卡住。
- 欲获取更多信息，请联系供应商：BURNDY，http://www.we-llc.com。

3) 使用Schletter夹具将太阳能组件安装至组件安装支架（接地零件通过UL467测试）。

![Schletter夹具示意图](image)

- 建议夹紧扭矩是20.5牛 - 米 / 15 英尺 - 磅。
- 欲获取更多信息，请联系供应商：Schletter，http://www.solar.schletter.eu。
为确保组件的最佳性能，尚德建议采取下列维护措施：

- 至少一年清洁一次组件或根据污染情况，经常进行清洁。清除表面所有有机物。有污渍或污染物的组件可能会降低系统的发电量。清洁组件表面时请使用清水和柔软的非腐蚀性海绵或布料。也可以使用温和的、非腐蚀性的清洁剂去除顽固污渍。
- 不受控制的污染以及未及时清洁组件都将会使质保无效。
- 每隔6个月检查电气、接地和机械连接部位，确保它们干净、安全、没有损坏以及无生锈。否则将会使质保无效。
- 在出现接地故障时，在由授权的太阳能逆变器服务人员校正并在逆变器完全运行前，切勿使用水清洗或喷洒组件，这可能导致点击事故或严重的问题。
- 若有任何问题，请向专业太阳能服务供应商咨询并寻求建议。
- 注意：请遵守太阳能制造商对系统中所使用的所有组件的维护说明，例如支架、充电调节器、逆变器、电池等。
